

Sprint report 1

Start date: 09.12.2023

End date: 23.12.2023

All team members were available to work on the first sprint of the project.

Stan Catalin Andrei : 6 hours.

Radu George-Marian: 7 hours.

Pavel Alexandru: 6 hours.

Andries Vlad-Andrei: 7 hours

Gheorghe Marius-Catalin: 4 hours

Project setup meeting

Backlog items:

-  **done**
-  **push to future sprint**
-  **eliminate from project**

User stories:

1. As a website guest I see an introductory page, so that I can make a first impression about the app. 
2. As a website guest I can register on the application, so that I can create an account for myself. 
3. As a registered user I can log into my account, so that I have access to all the functionalities of the app. 
4. As a registered user I can delete my account in my account management page, so that I can quit using the application if I want to. 
5. As a registered user I can edit my personal information, so that I can correct possible mistakes. 

Acceptance criteria:

A guest enters the site

Given a guest enters the website

When the response is fully served

Then the guest must see an introductory page.

A guest registers successfully

Given a guest is on the registration page

When they enter the registration data and click on the submit button
Then a new account is created with the inserted data.

There is another account with the same email ●

Given a guest is on the registration page and there is another account with the same email

When they click on the submit button

Then they get the error message "There is already a registered account with the email entered email address".

A registered user logs into their account ●

Given a registered user is on the login page and they enter their login data

When they click on the submit button

Then they are logged in and redirected to the introductory page.

Email or password incorrect at login ●

Given a registered user is on the login page and they entered a wrong email or password

When they click on the submit button

Then they get an error message corresponding to the situation and stay on the login page.

Registered user edits their personal data ●

Given a logged in user is on the account management page and has completed the updated info

When they click on the submit button

Then the information is updated in the database and the page is reloaded with the new details.

Registered user enters invalid update info ●

Given a logged in user is on the account management page and has completed the invalid update info (first/last name contain something else than letters, spaces, digits and dashes or the new password does not meet the requirements)

When they click on the submit button

Then they get an error message corresponding to the case they are in and stay on the account management page.

Registered user deletes their account ●

Given a logged in user is on the account management page and has entered their password for account deletion

When they click the "Delete Account" button

Then the account is deleted from the database, the user is logged out and redirected to the introductory page as a guest.

Password is not correct when deleting the account ●

Given a logged in user is on the account management page and has entered a wrong password for account deletion

When they click on the "Delete Account" button

Then they receive the message error "Incorrect Password" and stay on the account management page.

Sprint Review:

Meeting

How close are you to delivering the functionalities:

The basic functionalities should be delivered in 3 weeks as we plan to implement basic principal management of schools and basic children management by parents in the next sprint and test those functionalities.

How close are you to an MVP:

We are far away from MVP because the application process of a child to a school is a complex process and we will start working on this in the 3rd sprint. Also we need to test APIs created during this sprint.

PM/PO/Client Meeting summary:

The client asked us to implement the parent management of their children ASAP, so the project manager addressed this request to the developers. The developers agreed to start working on this in the next sprint, but with little chances to succeed in the 2nd sprint.

The client was perplexed about the number of hours needed to configure the project and set up the signup / login pages and asked questions about the process and about the next steps in order for them to know where their money was going.

The project manager must call for an internal meeting with the developers in order to tell them what was discussed in the meeting with the client and ask them some questions in order to know what responses they will give to the client.

Something that you realized you wouldn't be able to achieve?

We were not able to implement the user account deletion and update functionalities, but they will be implemented in the next sprint.

Something extra you realized you were able to achieve? None

Sprint Retrospective:

The developers are satisfied with the current state of the project

The developers are not happy because they could not do the editing and deleting account parts yet.

The developers realized that configuring the environment is way harder than expected.

The developers realized that creating the sign-up/login pages is way easier than expected.
